

IT TALK: EDUCATION TECHNOLOGY ON DEMAND (ETOD)

Frontline Technologies Malaysia Sdn Bhd would like to organize a half day event (Presentation & demo showcase) related to "Education Technology on Demand" – **ETOD** solution. To find more info about what is **ETOD** and how it works? You're invited to attend this seminar.

Target Audience:

- Heads / senior IT staffs of Pusat Komputer
- Lecturer
- Librarian
- Admin Lab
- Technical Support Staff related to IT

Estimated duration: Half Day (9am – 1pm)

Target Date: To be confirm

Our objective is to deliver the solutions, tools and applications necessary for faculty, staff, and students to do their work and to store, retrieve, and share that work wherever they are and on whatever workstation is available.

Three foundational components are required to meet the objectives:

- **SunRay** Thin Client with no local OS, state or storage, device that requires no desktop administration and has no cycles of upgrade fatigue.
- **Virtual Display Computing (SGD)** Applications run on data center servers, Runs nearly any application type e.g: window, solaris, linux & etc, data resides in secure data center environment.
- **XYTHOS** Basic content management, Repository and collaboration suite. 100% web-based document management application that provides all of the essential document and file management features distributed organizations need to safely access, manage and share content over the web. It can be accessed via any web browser, from anywhere, improving collaboration and employee productivity.

Feedback for SGD & Xythos:

"Sun Secure Global Desktop Software lets us securely access the Internet, and introduce new methods of learning, using state-of-the-art educational applications and the vast amount of information available on the Web. We found the software to be being flexible, open and secure, and therefore a great fit in our present and future IT strategies. "

— Raimund Michaelis, Project Manager, Lernstatt Paderborn, City of Paderborn

"Xythos is a key part of Northeastern on demand, enabling the Northeastern community to securely access their files over the web with version control and other basic library services. Our users can better work and collaborate and ultimately be more effective."

*Rick Mickool
Executive Director & CTO, Information Services
Northeastern University*
