

## ITtalk: Microsoft IT Workshop Presentation

Microsoft Malaysia would like to conduct some IT Solution briefings:

1. **Microsoft Vista** – the most secure, user-friendly Microsoft operating system to-date.
2. **Microsoft Office 2007** – our latest integrated productivity suite, more modular and powerful than before.
3. **Visual Studio 2005** – a full-featured development environment for developers which integrates seamlessly with other office productivity software for document management, project management and application design.

**Target Audience:** ALL

Estimated duration: 2.5 - 3 hours.

### Comments for Microsoft Office 2007:

"Unless you have absolutely no need to be more productive, you want Office 2007...functionality is easier to find and master than ever before" (Windows Supersite)

"The suite-wide attention to collaboration will enable users and enterprises as a whole to work with information in new and more creative ways." (eWeek Labs)

"the 2007 version combines power, ease of use, and visual clarity in ways that leave earlier versions far behind." (PC Magazine)

"(Microsoft) has taken a good product and made it better and fresher." (Wall Street Journal Online)

### Comments for Microsoft Vista:

"Best New Product (Computers & Hardware category)", Consumer Electronics Show (CES) 2007

"...very stable and feature rich... Vista could be a worthy upgrade for most PC users." (ZDNet review)

"Vista is both broad and deep, with major new features and functionality... Windows Vista's networking capabilities are best of breed" (Windows Supersite)

"...smart application developers and technology product marketers will build killer applications using Vista's advanced graphics and communications technology" (Forrester Research)

### Comments for Visual Studio 2005:

"This robust development environment offers a host of options for creating standalone, mobile, and Web-based applications whether you write for a few users or a few thousand... a major improvement for Web development" (PC Magazine)

"...offers developers a comprehensive, impressively choreographed environment for building a broad variety of applications that include both rich clients and Web services" (eWeek Labs)
